

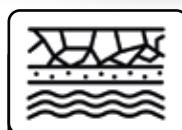

PHOTOVOLTAIC CANOPIES

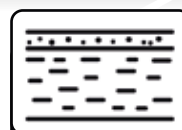

For the use of our smart charging systems, which can charge using excess photovoltaic production, we offer several canopy models.

Upon request, we provide quotations both with and without photovoltaic systems or electric vehicle charging systems.

The **Light** version is made of aluminum, while the **Free** version is made of galvanized steel and facilitates vehicle access in parking areas.

PHOTOVOLTAIC PANELS

The **E-Canopy** series canopies allow the installation of various photovoltaic panel models thanks to mounting systems that adapt to different sizes. At the time of requesting a quotation, please send the layout of the area and specify whether you want to integrate the photovoltaic system.

EV CHARGING SYSTEMS

Detas EvChargers charging systems are characterized by advanced technology that allows charge regulation in different ways, in particular by using excess photovoltaic production even after any storage batteries have been fully charged.
